

**GAIN VISIBILITY AND
CONTROL OVER SSL,
SSH ENVIRONMENTS**

SSL Certificate Management

SSL/TLS certificate discovery

Discover all SSL/TLS certificates deployed in your network and add them to a secure, centralized repository.

Certificate request workflow

Generate CSRs instantly; request and acquire public CA certificates through a hassle-free certificate request workflow.

Centralized deployment

Centralize the deployment of newly acquired certificates to their respective end-servers.

SSL vulnerability scan

Identify and remediate vulnerable SSL configurations and weak ciphers, and replace any revoked certificates.

Active Directory integration

Readily integrate, import, and manage certificates mapped to user accounts in Active Directory.

SHA-1 certificate flagging

Identify and replace certificates that use the obsolete SHA-1 hashing function.

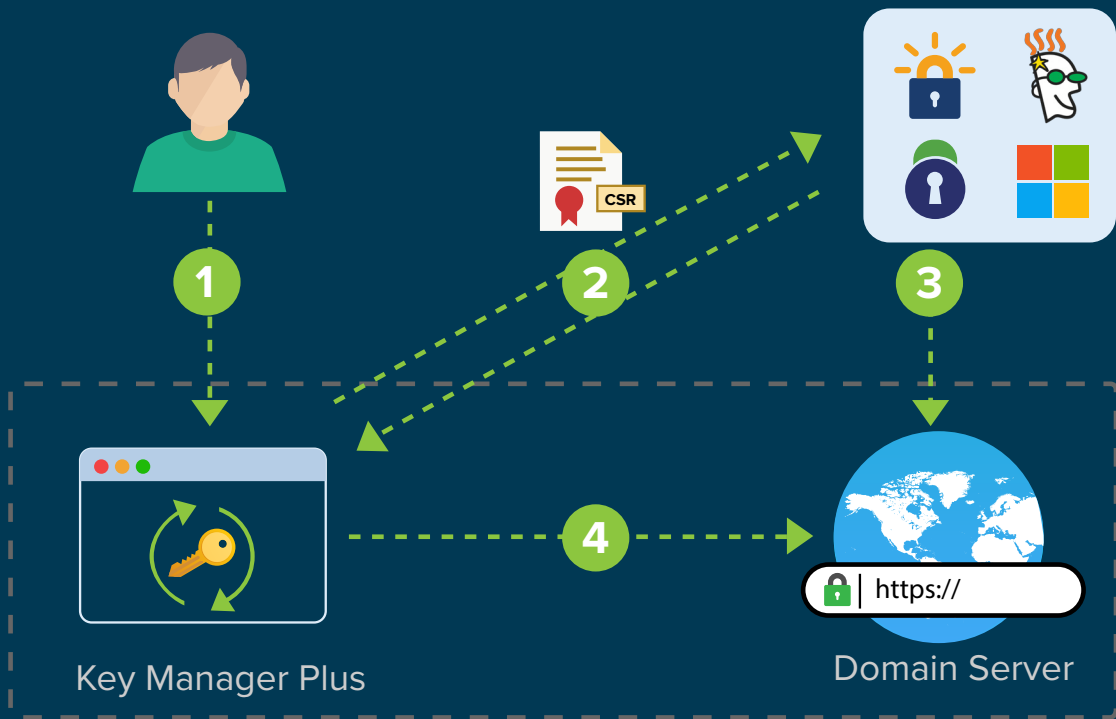

Expiration alerts

Eliminate service downtime by receiving customizable, recurring notifications on certificates that are about to expire.

Out-of-the-box integrations with leading certificate authorities

• Let's Encrypt • GoDaddy

• The SSL Store™ • Microsoft Certificate Authority

1

Request

Raise certificate requests using our built-in CSR generation tool.

2

Forward

Forward the request to a certificate signing authority for domain verification.

3

Validate

Automate domain control validation and certificate acquisition; import the acquired certificate into Key Manager Plus.

4

Deploy

Deploy the certificate to its corresponding end-servers from Key Manager Plus.

SSH Key Management

SSH key discovery

Discover all SSH keys in your network and add them to a secure, centralized repository.

Key creation and deployment

Create new SSH key pairs; associate them with users in bulk and deploy them to target systems.

Periodic key rotation

Create scheduled tasks to rotate SSH keys automatically at periodic time intervals and avoid privilege misuse.

Key-user mappings

Get a holistic view of key to user relationships across your organization through distinct mapping of individual keys with their respective user accounts.

Remote SSH connections

Launch one-click SSH connections to remote systems.

Disaster recovery

Schedule backups of your entire database at periodic intervals for disaster recovery purposes.

Auditing and reports

Establish a tamper-proof auditing mechanism and get instant access to comprehensive reports on all user activities.

Experts' take on Key Manager Plus

The Hacker News

“We were quite impressed by [how Key Manager Plus] simplifies even complex processes of key management, where most organizations fail, leaving themselves vulnerable to cyberattacks.”

TechTarget

“A web-based tool that can help to consolidate, control, manage, monitor, and audit the entire life cycle of SSH keys and SSL certificates is ManageEngine Key Manager Plus.”

FinancesOnline

“[Key Manager Plus] serves as an all-around solution for handling digital identities.”

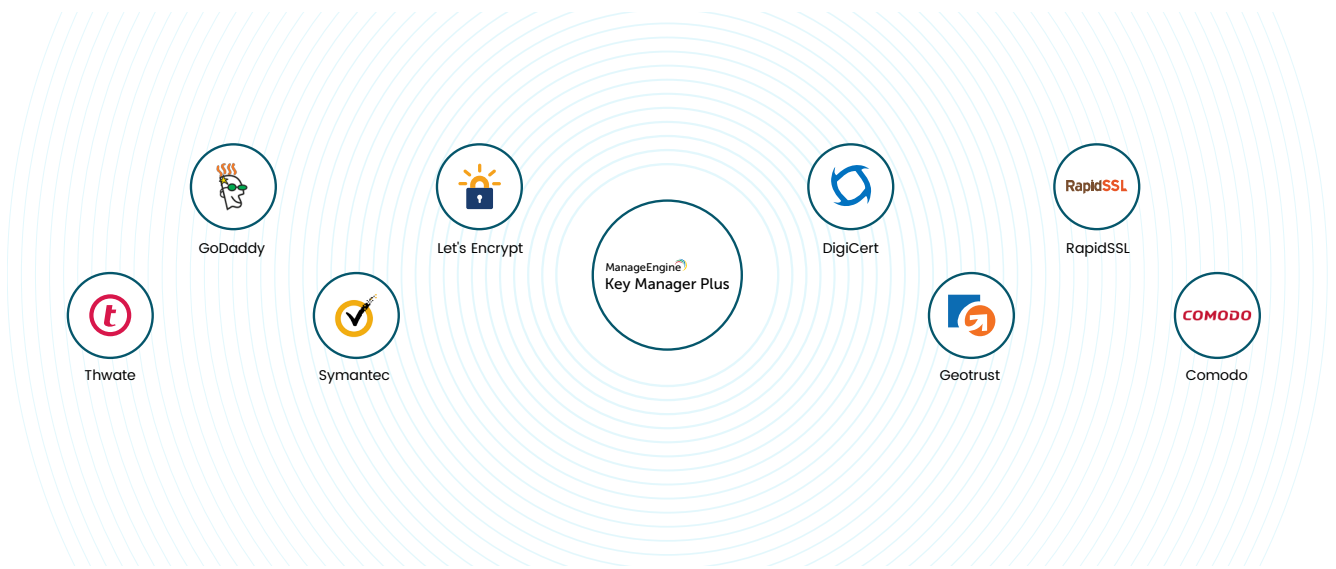

Key Manager Plus enables us to stay on top of SSL certificates for all of our websites. With Key Manager Plus, we're able to monitor which certificates are nearing expiration and roll out new certificates in a timely manner.

Ken Odibe

Senior cloud infrastructure consultant,
Sapphire Systems.

Key Manager Plus facilitates end-to-end life cycle management of public CA certificates through integration with world's leading certificate authorities.
