Security Information and Event Management

A Reality Report

SIEM hinges mainly on log data, but how is it managed today?

52%   48%

Over 52% of the
IT organizations still use
conventional methods
(e.g. manual or in-house scripts)
to manage logs

Less than 48% of the IT
organizations use
specialized solutions
to manage logs

On average, IT admins spend over **200** hours a year analyzing logs

If you're Steve Fossett[1], you could complete 3 trips around the world in that time

Top 4 reasons why SIEM solutions are critical to business

Real-time security event monitoring

Incident investigation

Compliance reporting

IT performance management

2 biggest reasons that stop companies from deploying SIEM

Steep learning curve & deployment

Expensive

Today's weather for public cloud security event monitoring

50% of the respondents think tracking cloud infrastructure events are critical for their IT.

Partly cloudy

Top 4 regulatory standards adhered to by businesses

PCI DSS

ISO 27001

HIPAA

SOX
