

Weed out weak passwords and improve IT security.

Weak Password Users Report

The Weak Password Users Reporting Tool lets you scan your Active Directory domains for users with weak passwords, thereby eliminating potential security issues.

What can I use the Weak Password Users Reporting Tool for?

- Quickly and easily identify users with weak passwords in your Active Directory domain.
- Use the reports to find users and change their passwords.
- Add your own list of weak passwords to the predefined list (go to <install_dir>\bin and edit PasswrodPatterns text file to add your own list).
- Rerun the tool periodically to confirm the use of stronger domain passwords.

Add simple, convenient and absolutely **FREE** to the above benefits!
