Don't sit glued to your computers anymore. Enjoy all the Christmases that come your way from now on!

Local User Manager

This Windows local Users Management Tool eliminates the need to manage user accounts locally! This tool provides information on local user accounts and allows managing them using a convenient user interface. It also has a 'Quick Search' feature to search for the accessibility of specific computers. And lets you enable, disable accounts and reset passwords - all remotely.

What can I use the Local User Manager for?

To list all local user accounts from single/multiple computers.

To add or remove local user accounts.

To view the properties for any selected local user account.

To define or modify group memberships properties for any selected local user account.

To reset password for any selected local user account.

To enable/disable selected local user accounts.

Add simple, convenient and absolutely **FREE** to the above benefits!
