Northern Land Council uses AD360 to monitor their Windows Server environment closely

Company: **Northern Land Council** | Industry: **Government** | Country: **Australia**

Business Needs

The Northern Land Council was established in 1973 to represent traditional Aboriginal landowners and Aboriginal people in the Top End of the Northern Territory of Australia. The most important responsibilities of the NLC are to consult with traditional landowners and other Aborigines with an interest in the land. NLC IT team needed to closely monitor their Windows Server environment.

Solution

NLC team was able to monitor their Windows Active Directory and Servers with the AD change monitoring and reporting module of AD360. Their primary need was to find a solution to the IT security questions raised by superiors; the 150+ preconfigured reports came as absolute relief to the team. The NLC were not only able to secure their Windows Server environment but also managed to meet regulations, export reports to departments and save on their IT team question and answer time with solid reports of user logins, duration, successful file / folder access and modifications and much more.

In addition to using the auditing module, Nothern Land Council wanted a solution to take care of their AD management needs. They used the unified Active Directory, Exchange and Office 365 management and reporting module of AD360. This helped NLC's IT administrators and technicians manage AD objects easily and generate user logon and NTFS permissions reports.

About AD360

AD360 is an integrated identity and access management (IAM) solution for managing user identities, governing access to resources, enforcing security, and ensuring compliance. From user provisioning, self-service password management, and Active Directory change monitoring, to single sign-on (SSO) for enterprise applications, AD360 helps you perform all your IAM tasks with a simple, easy-to-use interface.

AD360 provides all these functionalities for Windows Active Directory, Exchange Servers, and Office 365. With AD360, you can just choose the modules you need and start addressing IAM challenges across on-premises, cloud, and hybrid environments from within a single console.
