## Codeless Technology's one-stop solution for IT security auditing and compliance

Company: Codeless Technology B.V. | Industry: IT | Location: Netherlands

### About Codeless Technology

Codeless Technology B. V. is a software development company based in the Netherlands that specializes in transforming older software into modern web-based software that can run on any device. The company employs about 80 people at its headquarters in Dordrecht, and at an office in Iași, Romania. Codeless Technology has more than 10 years of experience maintaining various systems that total over 30 million lines of COBOL code.

“

AD360 is easy and straightforward to use with a lot of customization options.

”

**Arnout van Nes,**  
system administrator at Codeless Technology

### Business challenges faced by Codeless Technology

Codeless Technology has a hybrid Active Directory (AD) environment with a local server farm and resources in Azure AD, so the IT team was challenged with not being able to monitor all the changes in its infrastructure. To track any specific change in the network, the IT team had to surf through piles of logs, and check them individually, which was a time-consuming and error-prone process. Any error could result in a potential security lapse.

The company was also attaining ISAE certification, and finding it tedious to monitor its entire environment without having a bird's-eye view of its infrastructure.

Arnout van Nes, a system administrator at Codeless Technology, determined that the organization needed a solution for this obstacle. As Codeless Technology was already a customer of ManageEngine, it did not hesitate to evaluate AD360 after receiving a recommendation from ManageEngine's support team.

## **AD360 saves the day**

Implementing AD360 in Codeless Technology's environment was a breeze thanks to the automatic configuration of audit policies, and discovery of resources. The IT team was impressed with the capabilities when it first began utilizing AD360.

With AD360, the IT team at Codeless Technology is able to monitor both their on-premises AD and Azure AD environment from a single console, and vital information is just a click away, thanks to the solution's powerful search engine. It smartly analyzes all logs and generates numerous reports to give a complete view of the IT environment. The dashboard also provides an option to configure helpful and time-saving widgets that display essential data in an intuitive, easy to interpret graphical format.

The IT team is happy it can generate customized reports according to its requirements, and easily create alerts to track changes so it can promptly take action on timely issues.

AD360 also helps Codeless Technology stay current with an ISAE standard by monitoring every aspect of its IT environment, and providing all relevant ISAE compliance reports.

## **About AD360**

AD360 is an integrated identity and access management (IAM) solution for managing user identities, governing access to resources, enforcing security, and ensuring compliance. From user provisioning, self-service password management, and Active Directory change monitoring, to single sign-on (SSO) for enterprise applications, AD360 helps you perform all your IAM tasks with a simple, easy-to-use interface.

AD360 provides all these functionalities for Windows Active Directory, Exchange Servers, and Office 365. With AD360, you can just choose the modules you need and start addressing IAM challenges across on-premises, cloud, and hybrid environments from within a single console.
