Key challenges

- ! Lack of a unified platform for log management and threat detection

- ! Difficulty detecting unusual user activity and potential insider threats

- ! Time-consuming audit preparation without pre-built compliance reports

- ! Limited integration between existing tools and security monitoring

ManageEngine solution – Log360

Use cases

- **Off-hours activity detection:** Flagged a user accessing large volumes of data during non-business hours using UEBA.

- **Failed login pattern detection:** Identified repeated failed logins caused by outdated service credentials, preventing brute-force risks.

- **Centralized visibility:** Consolidated Windows and infrastructure logs into a single console for faster investigation and audit readiness.

- **Seamless ecosystem integration:** Integrated smoothly with existing ManageEngine tools to unify operations without added complexity.

Business benefits

- Rapid detection of unusual user behavior such as non-business hour logins and excessive data access

- Improved visibility through centralized log management

- Proactive detection of failed logins and outdated credentials to prevent brute-force attempts

- Simplified compliance with ready-to-use audit reports

- Unified security and IT operations through seamless tool integration

> "A user was flagged when he started to access data at unusual hours and in large quantities. Log360 helped us detect and respond quickly."
