

ManageEngine ADManager Plus 6

What's New?

ADManager Plus offers: AD Automation | AD Management | AD Reporting | AD Delegation | Exchange Management

A brief introduction to ADManager Plus 6...

ADManager Plus 6 is the latest version of ManageEngine's Active Directory & Exchange Management solution. It offers:

Streamlined IAM services for Windows environment...

- ✓ Single-window Active Directory & Exchange management.
- ✓ Shortcuts to Everyday AD Data Management Tasks.
- ✓ Active Directory Automation.
- ✓ Active Directory Reporting (including IT compliance reports)
- ✓ Smart Active Directory Delegation
- ✓ Workflow engine for IAM in Active Directory.
- ✓ Provisions to make RBAC a point-n-click operation.

Active Directory automation and streamlined IAM through templates & role based access controls are the pillars of this major upgrade -- ADManager Plus 6.

New Features introduced in Version 6

- ✓ Automation Policies
- ✓ User Modification Templates
- ✓ Rule based User Modification Templates
- ✓ Enhanced Workflow
- ✓ Automatic Task Assigner
- ✓ GPO Quick View & Manager

1. Active Directory Automation Policies...

...automate a main task and any supplementary tasks -- in the sequence and at time intervals specified.

Example: In a company that hires employees on a yearly contract, administrator can configure the product to automatically.

- ✓ Create users whenever HR updates new user files
- ✓ Disable user accounts after 365 days
- ✓ Delete user accounts after company-permitted retention period

By applying this policy while automating a task, you can determine what other tasks should follow and when they should be executed. [Learn More...](#)

Modify Automation Policy

Automation Policy Name :

Description :

Automation Category :

Select Domain:

Instant Tasks

Main task of creating users automatically

User Provisioning Template to be applied

Successive Task(s)

Task Group
After days, from the time of executing the previous task

Supplementary task of disabling account after a year is being automated

Task Group
After days, from the time of executing the previous task

Another supplementary task being automated. After 45 day retention period, the disabled account is deleted

[+ Add another Task Group](#)

2. Drag-n-Drop Customizable User Modification Templates

...are to help you quickly edit user attributes. They make role-based access management a point-n-click activity.

In a template, pre-configure access permissions /entitlements of a user based on his position or department. Simply assign the template to a user when his position or department changes. Group memberships, Exchange mailbox storage and sending limits, and several entitlements can be modified in this fashion.

3. Rule Based User Modification Templates...

- ✓ Configure modification templates with "autofill conditions".
- ✓ Apply it while modifying accounts and have certain attributes autopopulated when those conditions are met

Example: Say, a company shuffles its staff among its 4 office locations often. Instead of entering information about manager, telephone, webpage, and address of new office whenever an employee is shifted, you can autopopulate them using templates and modification rules.

Rule 1

Specify the condition that should trigger autofill

Conditions -

- Office is Austin
- OR Manager is Hugh Munroe

Criteria : (1 or 2)

Assign Values

set --- Select Field --- to [] Add

Field List - All the fields in the list will be updated with the specified values.

Telephone number	- 512-456-5939
Web page	- www.admp-austin.com
Manager	- Hugh Munroe
P.O.Box	- 555-555
City	- Austin
Street	- Jane Austen Avenue

Specify the values that should be filled in when the condition is met

Similarly, set up rules for other 3 locations.

Rule 2

Rule 3

Rule 4

Create a template as shown here and apply it while modifying user account.

As you type the user's office, the corresponding phone number, manager name & address will autopopulate.

4. Enhanced Workflow | Product-specific Requester | Request History & Manager...

- ✓ Workflow, which specifies to whom a request (to perform AD operation) should be routed to for an approval, has been improved.
- ✓ Requester, the one who initiates an AD task request, can be taken from AD, or his role can be defined in the product.
- ✓ A repository of all requests initiated and completed is maintained for IT compliance record keeping. A neat UI is available to manage them.

5. Automatic Task Assigner: Smart Delegation

Most importantly, you can write task assignment rules and configure the product to automatically assign the AD tasks to the best or most qualified resources.

Assigning Rules

Create rules to evaluate request and assign to appropriate technicians. [Learn More...](#)

^ When request is Created

Rule
Create Rule to assign a request to appropriate technicians.

Rule Name : *

Rule Criteria

1.	<input type="text" value="Action"/>	<input type="text" value="Is"/>	<input type="text" value="Create Users"/>	Choose	<input type="text" value="X"/>	<input type="text" value="+"/>
----	-------------------------------------	---------------------------------	---	------------------------	--------------------------------	--------------------------------

Criteria : 1

Perform Action
