

# Upgrade Guide

For customers using Applications Manager build No. 8010 to 10030

---

## Step 1 - Download Service Pack

- Download [Service Pack 10031](#), [Service Pack 11040](#), [Service Pack 15007](#), and [Service Pack 16842](#) and place it inside a folder in the machine where Applications Manager is installed.
- You might be asked to import ManageEngine public key certificate file during the upgrade process. Please download the [ppmsigner\\_publickey.crt](#) file and keep ready.

**Note:** This is a one-time process done to verify the integrity of PPM file.

## Step 2 - Shut down Applications Manager

- Shut down Applications Manager.
- Via command prompt, execute the **shutdownApplicationsManager.bat -force** command (**shutdownApplicationsManager.sh -force** for Linux) from the 'Applications Manager Home' folder.

## Step 3 - Backup Applications Manager

- As a good practice, we recommend you to take a complete backup of 'Applications Manager Home' folder.
- SQL backend users should connect to the SQL Management Studio & take a backup of the AMDB database in addition to the Applications Manager directory backup. [Click here](#) to know how to take the SQL database backup.
- To roll-back to the old version, rename the existing 'Applications Manager Home' directory and restore the complete backup copy of this directory in the same location.
- SQL backend users should restore the complete backup copy of the AMDB database as well using the SQL Management Studio. [Click here](#) to know how to restore the SQL database backup.
- PostgreSQL DB backend users should take a database backup of Applications Manager data. [Click here](#) to know how to take a backup and restore the backup data.
- For Applications Manager plugin users with PostgreSQL backend, we recommend that you take a backup of PostgreSQL database of the plugin and a complete folder backup of OpManager folder. (The OpManager folder contains Applications Manager plugin folder as well.)

## Step 4 - Upgrade Process

- Run the **updateManager.bat** script (**updateManager.sh -c** for Linux) under the '**Applications Manager Home/bin**' folder which invokes the Update Manager tool.
- Browse and select the Service pack file (.ppm) for 10031 saved in your computer.

- Click **Install** to initiate the upgrade process for 10031.
- Now, browse and select the Service pack file (.ppm) for 11040 saved in your computer.
- Click **Install** to initiate the upgrade process for 11040.
- Now, browse and select the Service pack file (.ppm) for 15007 saved in your computer.
- Click **Install** to initiate the upgrade process for 15007.
- Now, browse and select the Service pack file (.ppm) for 16842 saved in your computer.
- Click **Install** to initiate the upgrade process for 16842.
- If asked, browse and select the [ppmsigner\\_publickey.crt](#) file downloaded in the first step.
- Once you see the "Installed" message on your screen, click **Finish** to complete the installation.
- Now start the Applications Manager service.

**Note:**

- Start command prompt as an administrator [cmd -> right click --> run as administrator]. [Click here](#) to see the screenshot.
- < Applications Manager Home > refers to the directory in which you have installed the Applications Manager product. This directory location is specified by you when you install the product.
- For Enterprise edition setup, follow the same steps in all the Applications Manager instances (you must upgrade the Admin node first, followed by Managed nodes).
