# Make network security easy with correlation

## Log360 correlation engine

ManageEngine Log360 comes with a powerful correlation engine that detects attack patterns in near real-time. It identifies the log trail of various incidents as they span out over multiple devices in your network, and alerts you to the suspicious ones. The solution comes with over 30 attack patterns. Stay a step ahead of attackers and become proactive in tackling network threats.

## Features:

**Correlation dashboard:** Access incident reports, customize and schedule them as needed, and more. Over 30 correlation rules included.

**Timeline view:** View the sequence of logs that led to each detected event, and drill down to raw log information if needed.

**Custom rule builder:** Create custom rules using 250+ network actions, and specify time frames and use advanced filters, with an intuitive drag-and-drop interface.

**Ticket-based incident management:** Manage correlation alerts as tickets, assign them to specific technicians and track their status using the built-in incident management console.
